

Perforating and Slitting Wheels

bfs perforating and slitting wheels are manufactured in our factory in Reading. We aim to provide the highest quality product at the best possible price – off the shelf. Our standard wheels are made in O1 tool steel & hardened all the way through. Our first criterion is to produce tough perforators with teeth that will not chip or crack and will keep on running to meet today's demands for economic working methods and high press speeds.

bfs Regrind Service

Let **bfs** 're-activate' those worn-out perforation and slitting wheels at a fraction of the cost of new ones. We have up-to-date specialist machinery to re-sharpen all types of circular blades and can even put the teeth back (re-cut) for both standard and micro perforations. Just post them to **bfs** and we aim to return them within five working days.

Standard Cuts: 1,2,3,4,5,6,7,8,10,12,15mm

Standard Ties: 1.20, 1, 0.75, 0.50mm

Micro Perf: 20,23,25,30,40,60,70 TPI

Non standard perforations are made to order
