

MEWATEX® PLUS

The highly absorbent reusable cleaning cloth for printers

bfs
PRESSROOM SOLUTIONS

Made of high quality cotton with a very fine weave and virtually lint free

It's tough on dirt, yet gentle on surfaces. This makes it ideal for printers, especially where inking rollers, presses, blankets and ink trays are concerned. It's no wonder that so many Printers choose MEWATEX® PLUS.

The cloths are NOT for sale, but instead are part of an innovative leasing/laundry delivery and collection service that promotes less waste, recycling and sustainability.

MEWA already holds multiple awards in Europe and is now proud to be offering the service to UK printers through BFS.

Here's how it works:

- First, we deliver the cloths in one of two SaCon® Safety Containers ordered by you.
- When you're finished with a cloth, just drop it in the second SaCon® Safety Container.
- When the container is full, a MEWA driver will collect the used cloths and leave you the same number of clean cloths.
- After collection, we wash your re-usable cloths at the MEWA eco-friendly plant, inspect them carefully and replace any that are worn out.

Cloths from different industries are not laundered together, ensuring there is no cross contamination of printing ink, engine oil and metal shavings which could damage precious surfaces.

This end-to-end leasing model is a cost-effective as well as an environmentally friendly alternative to using single-use products. Instead of wasting resources by throwing wipes away, MEWA wash them responsibly and sustainably.
